

EY Global Tax Platform

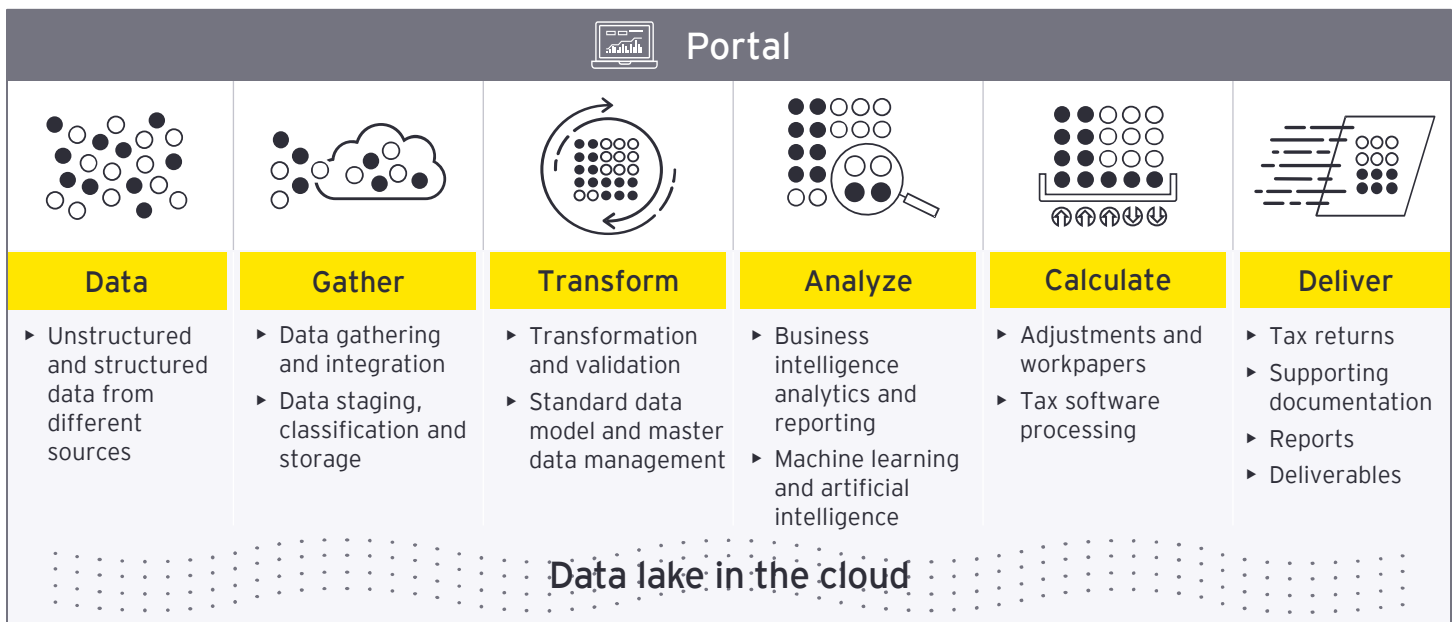

An approach that mitigates risk, controls cost and drives value

In the complex global tax landscape, multinational organizations need access to real-time global data that offers clear insights into their opportunities, obligations and risks. While some service providers claim to have technology that can tackle this challenge, EY Tax offers end-to-end capabilities to support your worldwide tax function. Over the last several years, we have invested in core data management capabilities, developing an innovative end-to-end platform that supports all tax business solutions.

EY Global Tax Platform (GTP)

Built by leveraging our technology and managed services domain knowledge, GTP redefines how tax operates, utilizing Microsoft Azure cloud technology to gather and store data in a safe and secure environment. GTP combines a common data platform with the power of dashboards, reporting and advanced analytics to better support your evolving needs.

GTP also integrates with leading-class tax reporting software to provide maximum coverage for your global footprint. GTP helps you address your global tax challenges cost efficiently and allows your tax function to focus on what it does best: driving value through planning.

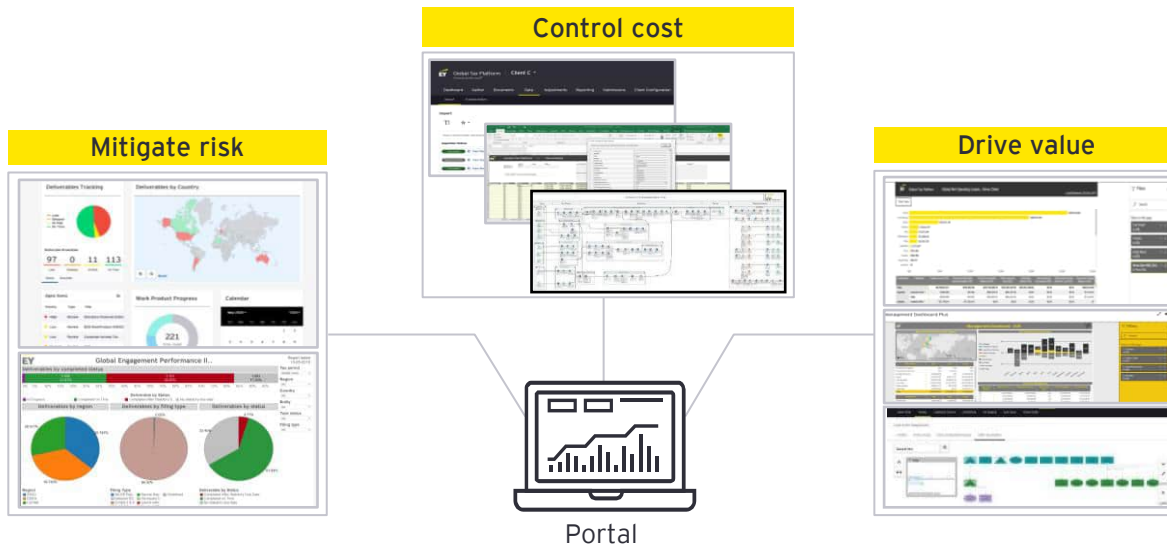

What is GTP?

GTP, a cloud-enabled platform, leverages secure Microsoft Azure cloud infrastructure to store your data in a data lake repository. This offers your tax team one real-time portal and provides transparent visibility through dashboards that monitor workflow and process.

What differentiates GTP:

- ▶ Built by EY, leveraging our technology and managed services domain knowledge, focusing on the tax requirements of today and with a vision of the capabilities that will be needed in the future.
- ▶ GTP is “future-proof” as it is a true data management platform that integrates state-of-the-art engines in a componentized manner, enabling it to quickly update and replace old technologies with new ones in a plug-and-play fashion.
- ▶ Powerful data management technology that supports data collection and reuse for end-to-end delivery of tax services, storing all relevant data in a single technology platform.
- ▶ Tax software agnostic and integrates with leading-class tax engines.
- ▶ By leveraging our strategic global alliances, GTP provides you with leading technology to support your tax success.
- ▶ Allows you to benefit from investments EY has made and shared across our core business, reducing major investments to develop and maintain your own tax technology systems.

GTP benefits

Mitigate risk	By giving you real-time access, control and transparency, GTP helps you mitigate your risk.
Control cost	With your data stored in a central data lake, you can repurpose it for different projects, and avoid requesting or collecting data more than once.
Drive value	GTP analytics generate real-time exception-based insights at your fingertips to support your planning efforts and allow you to take action immediately.
